### Universal Evaluation Board for Dual, High Speed Op Amps Offered in 10-Lead MSOP Packages

#### **FEATURES**

Enables quick breadboarding/prototyping
User defined circuit configuration
Edge mounted SMA connector provisions
Easy connection to test equipment and other circuits

#### **GENERAL DESCRIPTION**

The Analog Devices, Inc., dual, 10-lead MSOP universal evaluation board is designed to help users evaluate dual, high speed op amps offered in 10-lead mini small outline packages (MSOP). The dual MSOP board is a bare board (that is, no components are soldered to the board) that enables users to quickly prototype a variety of dual op amp circuits, thereby minimizing risk and reducing time to market.

Figure 1 shows the component side of the bare evaluation board, and Figure 2 shows the solder side of the evaluation board.

The evaluation board is a 6-layer printed circuit board (PCB) that accepts SMA edge mounted connectors on the inputs and outputs for efficient connection to test equipment or other circuitry. The ground plane and component placement are designed to minimize parasitic inductances and capacitances. The evaluation board components are primarily 0603 case size, with the exception of the electrolytic bypass capacitors (C1 and C2), which are 1206 case size.

Figure 3 shows the evaluation board schematic. Figure 4 and Figure 5 show the assembly drawing and the layout pattern of the component side, respectively. The bill of materials is listed in Table 1.
