Ultra-Small, Low-Cost, 85MHz Op Amps with Rail-to-Rail Outputs and Disable

MAX4389/MAX4390/MAX4392–MAX4396

General Description

The MAX4389/MAX4390/MAX4392–MAX4396 family of op amps are unity-gain stable devices that combine high-speed performance, rail-to-rail outputs, and disable mode. These devices are targeted for applications where an input or an output is exposed to the outside world, such as video and communications.

The MAX4389/MAX4390/MAX4392–MAX4396 operate from a single 4.5V to 11V supply or from dual $\pm 2.25V$ to $\pm 5.5V$ supplies. The common-mode input voltage range extends to the negative power-supply rail (ground in single-supply applications). The MAX4389/MAX4390/MAX4392–MAX4396 consume only 5.5mA of quiescent supply current per amplifier while achieving a 85MHz -3dB bandwidth, 27MHz 0.1dB gain flatness, and a 500V/ μs slew rate. Disable mode sets the outputs to high impedance while consuming only 450 μA of current.

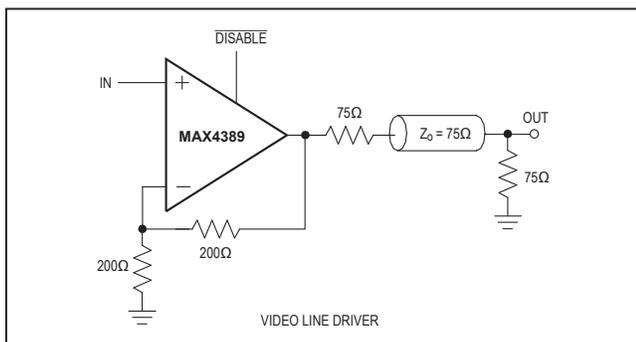

The MAX4389 single, MAX4393 dual, MAX4394 triple, and MAX4396 quad include disable capabilities. The MAX4389 and MAX4390 are available in ultra-small, 6-pin SC70 packages.

Applications

- Set-Top Boxes
- Surveillance Video Systems
- Analog-to-Digital Converter Interface
- CCD Imaging Systems
- Digital Cameras
- Video-on-Demand
- Video Line Driver

μMAX is a registered trademark of Maxim Integrated Products, Inc.

Typical Operating Circuit

Features

- Low Cost
- High Speed
 - 85MHz -3dB Bandwidth
 - 27MHz 0.1dB Gain Flatness
 - 500V/ μs Slew Rate
- Single 4.5V to 11V or Dual $\pm 2.25V$ to $\pm 5.5V$ Operation
- Rail-to-Rail Outputs
- Input Common-Mode Range Extends to V_{EE}
- Low Differential Gain/Phase: 0.015%/0.015°
- Low Distortion at 5MHz
 - -59dBc Spurious-Free Dynamic Range
- High Output Drive: $\pm 50mA$
- 450 μA Disable Capability (MAX4389/MAX4393/MAX4394/MAX4396)
- Space-Saving SC70, SOT23, μMAX^{\circledR} , or TSSOP Packages

Absolute Maximum Ratings

Supply Voltage (V_{CC} to V_{EE}).....	-0.3V to +12V	8-Pin SO (derate 5.88mW/°C above +70°C).....	471mW
IN_+ , IN_- , OUT_- , $DISABLE$	($V_{EE} - 0.3V$) to ($V_{CC} + 0.3V$)	8-Pin μ MAX (derate 4.5mW/°C above +70°C).....	362mW
Differential Input Voltage.....	$\pm 2.5V$	10-Pin μ MAX (derate 5.6mW/°C above +70°C).....	444mW
Current into Input Pins.....	$\pm 20mA$	14-Pin SO (derate 8.33mW/°C above +70°C).....	667mW
Output Short-Circuit Duration to V_{CC} or V_{EE} (Note 1).....	Continuous	14-Pin TSSOP (derate 10mW/°C above +70°C).....	727mW
Continuous Power Dissipation ($T_A = +70^\circ C$)		20-Pin TSSOP (derate 10.9mW/°C above +70°C).....	879mW
5-Pin SOT23 (derate 7.1mW/°C above +70°C).....	571mW	Operating Temperature Range.....	-40°C to +85°C
6-Pin SOT23 (derate 8.7mW/°C above +70°C).....	696mW	Junction Temperature.....	+150°C
6-Pin SC70 (derate 3.1mW/°C above +70°C).....	245mW	Storage Temperature Range.....	-65°C to +150°C
		Lead Temperature (soldering, 10s).....	+300°C

Note 1: Continuous power dissipation must also be observed.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Thermal Characteristics (Note 2)

PACKAGE TYPE	THERMAL RESISTANCE, SINGLE LAYER BOARD		THERMAL RESISTANCE, MULTI-LAYER BOARD	
	θ_{JA} Junction-to-ambient thermal resistance	θ_{JC} Junction-to-case thermal resistance	θ_{JA} Junction-to-ambient thermal resistance	θ_{JC} Junction-to-case thermal resistance
5-Pin SOT23	324.3°C/W	82°C/W	255.9°C/W	81°C/W
6-Pin SOT23	115°C/W	80°C/W	74.6°C/W	6°C/W
6-Pin SC70	326°C/W	115°C/W	326.5°C/W	115°C/W
8-Pin SO	170°C/W	40°C/W	136°C/W	38°C/W

Detailed Description

The MAX4389/MAX4390/MAX4392–MAX4396 are dual-supply, rail-to-rail, voltage-feedback amplifiers that employ current-feedback techniques to achieve 500V/μs slew rates and 85MHz bandwidths. Excellent harmonic distortion and differential gain/phase performance make these amplifiers an ideal choice for a wide variety of video and RF signal-processing applications.

Applications Information

The output voltage swings to within 200mV of each supply rail. Local feedback around the output stage ensures low open-loop output impedance to reduce gain sensitivity to

load variations. The input stage permits common-mode voltages to the negative supply and to within 2.25V of the positive supply rail.

Choosing Resistor Values

Unity-Gain Configuration

The MAX4389/MAX4390/MAX4392–MAX4396 are internally compensated for unity gain. When configured for unity gain, a 24Ω resistor (R_F) in series with the feedback path optimizes AC performance. This resistor improves AC response by reducing the Q of the parallel LC circuit formed by the parasitic feedback capacitance and inductance.

Video Line Driver

The MAX4389/MAX4390/MAX4392–MAX4396 are low-power, voltage-feedback amplifiers featuring large-signal ($2V_{P-P}$) bandwidths of 90MHz and 0.1dB large-signal gain flatness of 24MHz. They are designed to minimize differential-gain error and differential-phase error to 0.015% and 0.015° , respectively. They have a 21ns settling time to 0.1%, 500V/ μ s slew rates, and output-current-drive capability of up to 50mA making them ideal for driving video loads.

Inverting and Noninverting Configurations

Select the gain-setting feedback (R_F) and input (R_G) resistor values to fit your application. Large resistor values increase voltage noise and interact with the amplifier's input and PCB capacitance. This can generate undesirable poles and zeros and decrease bandwidth or cause oscillations. For example, a noninverting gain-of-two configuration ($R_F = R_G$) using 2k Ω resistors, combined with 1pF of amplifier input capacitance and 1pF of PCB capacitance, causes a pole at 79.6MHz. Since this pole is within the amplifier bandwidth, it jeopardizes stability. Reducing the 2k Ω resistors to 100 Ω extends the pole frequency to 1.59GHz, but could limit output swing by adding 200 Ω in parallel with the amplifier's load resistor (Figures 1a and 1b).

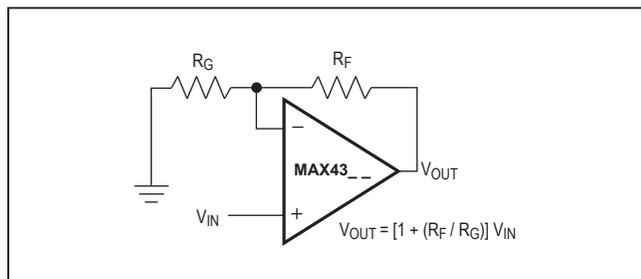

Figure 1a. Noninverting Gain Configuration

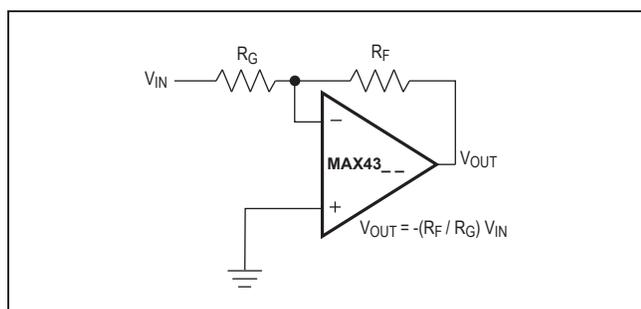

Figure 1b. Inverting Gain Configuration

Layout and Power-Supply Bypassing

The MAX4389/MAX4390/MAX4392–MAX4396 operate from single 4.5V to 11V or from dual $\pm 2.25V$ to $\pm 5.5V$ supplies. Bypass each supply with a 0.1 μ F capacitor as close to the pin as possible.

Maxim recommends using microstrip and stripline techniques to obtain full bandwidth. To ensure that the PCB does not degrade the amplifier's performance, design it for a frequency greater than 1GHz. Pay careful attention to inputs and outputs to avoid large parasitic capacitance. Whether or not you use a constant-impedance board, observe the following design guidelines:

- Do not use wire-wrap boards; they are too inductive.
- Do not use IC sockets; they increase parasitic capacitance and inductance.
- Use surface-mount instead of through-hole components for better, high-frequency performance.
- Use a PCB with at least two layers; it should be as free from voids as possible.
- Keep signal lines as short and as straight as possible. Do not make 90° turns; round all corners.

Low-Power Disable Mode

The MAX4389/MAX4393/MAX4394/MAX4396 feature a disable function that allows the amplifiers to be placed in a low-power, high-output impedance state. When the disable pin (DISABLE) is active, the amplifier's output impedance is 95k Ω . This high resistance and the low 2pF output capacitance make the MAX4389/MAX4390/MAX4392–MAX4396 in RF/video multiplexer or switch applications. For larger arrays, pay careful attention to capacitive loading (see the *Output Capacitive Loading and Stability* section).

Output Capacitive Loading and Stability

The MAX4389/MAX4390/MAX4392–MAX4396 are optimized for AC performance. They are not designed to drive highly reactive loads, which decrease phase margin and may produce excessive ringing and oscillation. Figure 2 shows a circuit that eliminates this problem. Figure 3 is a graph of the Optimal Isolation Resistor (R_S) vs. Capacitive Load. Figure 4 shows how a capacitive load causes excessive peaking of the amplifier's frequency response if the capacitor is not isolated from the amplifier by a resistor. A small isolation resistor (usually 10 Ω to 15 Ω) placed before the reactive load prevents ringing and oscillation. At higher capacitive loads, AC performance is controlled by the interaction of the load capacitance and the isolation resistor. Figure 5 shows the effect of a 15 Ω isolation resistor on closed-loop response.

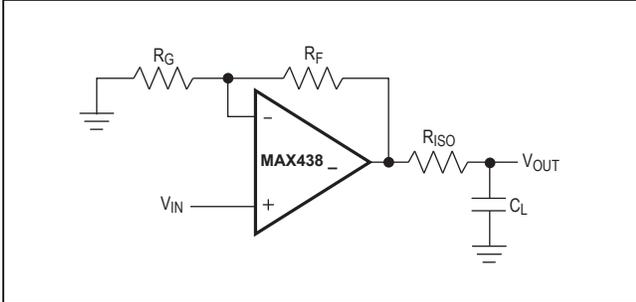

Figure 2. Driving a Capacitive Load Through an Isolation Resistor

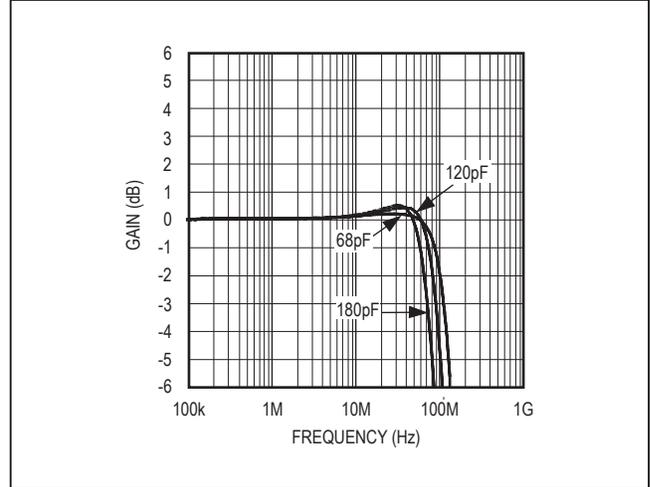

Figure 5. Small-Signal Gain vs. Frequency with Load Capacitance and 27Ω Isolation Resistor

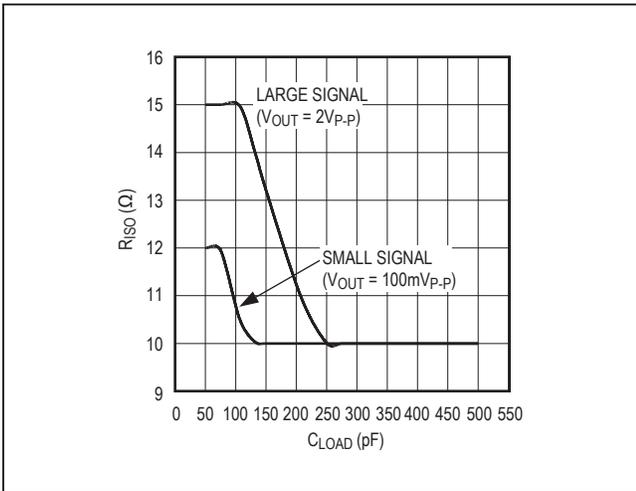

Figure 3. Isolation Resistance vs. Capacitive Load

Chip Information

PROCESS: BiCMOS

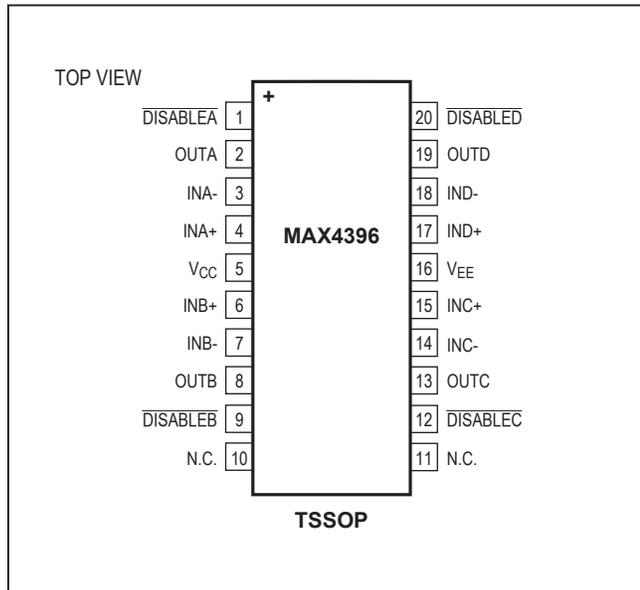

Pin Configurations (continued)

MAX4389/MAX4390/ MAX4392–MAX4396

Ultra-Small, Low-Cost, 85MHz Op Amps with
Rail-to-Rail Outputs and Disable

Pin Configurations (continued)

Ordering Information (continued)

PART	TEMP RANGE	PIN-PACKAGE	TOP MARK
MAX4392 ESA+T	-40°C to +85°C	8 SO	—
MAX4392EUA+T	-40°C to +85°C	8 μ MAX	—
MAX4393 EUB+T	-40°C to +85°C	10 μ MAX	—
MAX4394 ESD+T	-40°C to +85°C	14 SO	—
MAX4394EUD+T	-40°C to +85°C	14 TSSOP	—
MAX4395 ESD+T	-40°C to +85°C	14 SO	—
MAX4395EUD+T	-40°C to +85°C	14 TSSOP	—
MAX4396 EUP+T	-40°C to +85°C	20 TSSOP	—

+Denotes a lead(Pb)-free/RoHs-compliant package.

/V denotes an automotive qualified part.

T = Tape and reel.

Selector Guide

PART	NO. OF AMPS	DISABLE
MAX4389	1	Yes
MAX4390	1	No
MAX4392	2	No
MAX4393	2	Yes
MAX4394	3	Yes
MAX4395	4	No
MAX4396	4	Yes

Package Information

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	OUTLINE NO.	LAND PATTERN NO.
6 SC70	X6SN+1	21-0077	90-0189
6 SOT23	U6SN+1	21-0058	90-0175
5 SOT23	U5+1	21-0057	90-0174
8 μ MAX	U8+1	21-0036	90-0092
10 μ MAX	U10+2	21-0061	90-0330
8 SO	S8+2	21-0041	90-0096
14 SO	S14+1	21-0041	90-0112
14 TSSOP	U14+1	21-0066	90-0113
20 TSSOP	U20+3	21-0066	90-0116

Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
4	11/09	Added automotive qualified parts	2, 15
5	5/14	Revised package codes	16
6	4/15	Removed automotive packages from data sheet	1, 15
7	11/21	Added Package Thermal Characteristics	2
8	1/22	Updated Package Thermal Characteristics	2
