

DATA SHEET

SKY85300-21: 2.4 GHz, 256 QAM Front-End Module for WLAN and Bluetooth® Applications

Applications

- Wi-Fi-enabled smartphones, tablets, and mobile/portable devices
- System-in-Package (SIP) modules for embedded systems

Features

- Integrated high-performance 2.4 GHz PA, harmonic filter, LNA with bypass, and T/R switch
- Fully matched input and output
- LNA with integrated bypass mode
- High performance SP3T switch to support Bluetooth® signals and Wi-Fi functions
- Integrated positive slope power detector
- Transmit gain: 26 dB
- Receive gain: 12 dB
- Output power: +22 dBm, MCS7, 5 V
- Output power: +21 dBm, MCS9, 5 V
- Small QFN (16-pin, 3 x 3 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Figure 1. SKY85300-21 Block Diagram

Description

The SKY85300-21 is a complete 802.11b/g/n 256 QAM WLAN RF front-end module (FEM) with a port suitable for Bluetooth® signals. The device provides all functionality of a fully matched power amplifier (PA), power detector, harmonic filter, low-noise amplifier (LNA), and single-pole, triple-throw (SP3T) switch.

The SKY85300-21 provides a complete 2.4 GHz WLAN RF solution from the output of the transceiver to the antenna, and from the antenna to the input of the transceiver. The LNA increases the receive sensitivity of embedded solutions to improve range or to overcome the insertion loss of cellular filters (often included for mobile applications).

The SKY85300-21 also includes a transmitter power detector with 20 dB of dynamic range, and a digital enable control for transmitter power ramp on/off control.

The device is provided in an ultracompact, 16-pin 3 x 3 mm Quad Flat No-Lead (QFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Figure 2. SKY85300-21 Pinout (Top View)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to Skyworks Definition of Green™, document number SQ04-0074.

Table 1. SKY85300-21 Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	VDET	Power detector output voltage	9	LEN	LNA enable control input
2	N/C	No connection	10	N/C	No connection
3	VCC2	PA positive supply voltage	11	BT	Bluetooth® signal function input/output
4	VCC1	PA positive supply voltage	12	GND	Ground
5	TX	RF transmit PA input	13	CBT	Bluetooth® signal function antenna switch control
6	PEN	PA enable control input	14	CRX	Receive antenna switch control
7	GND	Ground	15	GND	Ground
8	RX	RF receive LNA output	16	ANT	Antenna

Technical Description

The SKY85300-21 is comprised of a high-efficiency 2.4 GHz PA, 2.4 GHz LNA, and 2.4 GHz SP3T switch. The device is fully-matched, and requires few external components for optimal performance, which makes it ideal for small portable/mobile applications. The FEM provides a typical gain of 26 dB. The LNA supports an enable/disable mode and bypass mode for power savings when not in receive mode. The PA can be shut off using the PA_EN signal (pin 6).

The low-loss SP3T switch provides the T/R switching function on the SKY85300-21.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY85300-21 are provided in Table 2. The recommended operating conditions are specified in Table 3 and electrical specifications are provided in Tables 4 through 9.

The state of the SKY85300-21 is determined by the logic provided in Table 10.

Table 2. SKY85300-21 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	V _{CC1} , V _{CC2}	-0.3	+5.5	V
DC input on control pins	V _{IN}	-0.3	+3.6	V
Transmit input power (ANT terminated in 50 Ω match)	P _{IN}		+5	dBm
Operating temperature	T _A	-40	+85	°C
Storage temperature	T _{ST}	-40	+150	°C
Electrostatic discharge: Human Body Model (HBM), Class 1C	ESD		1000	V

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Industry-standard ESD handling precautions must be adhered to at all times to avoid damage to this device.

Table 3. SKY85300-21 Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Units
Supply voltage relative to GND = 0 V	V _{CC1} , V _{CC2}	3.0	5.0	5.25	V
Operating temperature	T _A	-40	+25	+85	°C

Table 4. SKY85300-21 Electrical Specifications: DC Characteristics¹**(V_{CC1} = V_{CC2} = 5.0 V, P_{EN} = 3.3 V, T_A = 25 °C, All Unused Ports Terminated with 50 Ω, Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Total supply current	I _{CC}	P _{OUT} = +21 dBm		200	230	mA
		P _{OUT} = +22 dBm		225		mA

Low	V _{IL}		0		0.4	V
Input current, high	I _{IH}	All pins except PEN PEN pin			20 100	μA μA
Input current, low	I _{IL}	All pins except PEN PEN pin			1 12.5	μA μA

¹ Performance is guaranteed only under the conditions listed in this table.

Table 10. SKY85300-21 Control Logic¹

Mode	CBT (Pin 13)	CRX (Pin 14)	LEN (Pin 9)	PEN (Pin 6)
All off	0	0	0	0
WLAN receive LNA	0	1	1	0
WLAN receive bypass	0	1	0	0
Bluetooth® signal transmit/receive	1	0	0	0
WLAN transmit	0	0	0	1

¹ "1" = +3.3 V, "0" = 0 V. Any state not described in this table places the switch into an undefined state. An undefined state does not damage the device.

Evaluation Board Description

The SKY85300-21 Evaluation Board is used to test the performance of the SKY85300-21 FEM. A suggested application schematic diagram is shown in Figure 3. The Evaluation Board is shown in Figure 4. Component values for the SKY85300-21 Evaluation Board are listed in Table 11.

Evaluation Board Setup Procedure

1. Connect the system ground to pin 8 of connector J7.
2. Apply 5 V to pins 1 and 3 (VCC1 and VCC2) of connector J7.
3. Test the RF paths as described by the control logic in Table 10.
4. Connect a digital multimeter to pin 15 of connector J7 to monitor the power detector voltage.
5. Monitor the ANT-to-RX performance by applying an RF signal to J3 (ANT) and measuring the response from the J2 (RX) connector output.
6. Monitor the transmit performance by applying an RF signal to connector J1 (TX) and monitoring the output power on the antenna port connector J3 (ANT).

CAUTION: Be careful not to overdrive the amplifier by applying too much RF on the device input.

Evaluation Board Losses

The board losses from the RF connectors of the evaluation board to the pins of the SKY85300-21 are:

ANT: 0.22 dB

BT (pin for port suitable for Bluetooth® signals): 0.22 dB

RX: 0.29 dB

TX: 0.35 dB

Circuit Design Considerations

The following design considerations are general in nature and must be followed regardless of final use or configuration:

- Paths to ground should be made as short as possible.
- The ground pad of the SKY85300-21 has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Because the circuit board acts as the heat sink, it must shunt as much heat as possible from the device.
- Therefore, design the connection to the ground pad to dissipate the maximum wattage produced by the circuit board. Multiple vias to the grounding layer are required.
- Optimum performance is guaranteed by following the application schematic, Bill of Materials (BOM), and Gerber files.
- The exposed die pad under the chip provides thermal and RF ground to the device. It is recommended that the maximum allowable number of vias be used to connect the PDB top metal (where the die is soldered) to internal ground plane(s) of the PCB.
- The RX, port suitable for Bluetooth® signals (TX), and ANT ports are AC-coupled and do not require DC blocking capacitors. The TX port (pin 5) has an on-chip inductor to ground followed by a DC blocking capacitor between the inductor and the die. Therefore, there is no DC present on this port.
- If the TX port is connected to an external component with DC present, a 10 pF (component C9) general-purpose blocking capacitor is recommended. If the TX port is connected to an external component without DC present, the 10 pF capacitor can be removed.
- The 10 pF decoupling capacitors, C3 and C4, should be on the primary side of the board at a minimum manufacturable distance from the FEM.
- The component placement of the rest of the components not mentioned in this section is not critical.

NOTE: A poor connection between the ground pad and ground increases junction temperature (T_J), which reduces the life of the device.

Package Dimensions

The PCB board layout footprint for the SKY85300-21 is shown in Figure 5. Figure 6 shows a typical part marking.

Package dimensions are shown in Figure 7, and tape and reel dimensions are provided in Figure 8.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY85300-21 is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
