Special Orders

My Cable Mart can assist you with the design and manufacture of virtually ANY consumer and commercial audio/video or other commercial cable. We will work closely with your sourcing department to provide you with technical engineering drawings and precise specifications to meet your needs. For previous customers, we have custom manufactured many of our existing cables with changes to standard lengths, materials, and ratings - such as RoHS, raw material of cabling, and specific specialized outer cable insulation. We can also source specialized audio/video electronics providing such quantities meet our manufacturer's MOQ (minimum order quantity).

Periodically, we get a request to provide a large quantity of a particular product for which we do not have adequate inventory. Typically for such requests, we can offer TWO methods to restock such products. Many times a regularly stocked product that is currently out of stock may already be "in transit" and will be available in a much shorter time:

- Standard Manufacturing - which can take 45 to 90 days to have available (ready to ship from the USA), and
- Expedited Manufacturing - which can take from 10 to 15 days to make available (ready to ship from the USA).

Deposits
Any special order product that is not part of our regular stock will require a 50% deposit, which will be applied to the balance of the invoice when the order is ready to ship from our FOB point in Minneapolis, MN USA. Should the special order project be cancelled AFTER manufacturing has started, this deposit will be non-refundable. If the product is a REGULARLY stocked product, but the quantity you are requesting exceeds our existing on-hand inventory, in general, we will not request a deposit.

Standard Manufacturing Process and Lead Times
My Cable Mart is the OEM manufacturer of approximately 95% of all the products that appear on our website. An "OEM manufacturer" means that we create the designs, specifications, and packaging for the specific product, and then work directly with the factory to produce this product to meet these specifications. We work with approximately 8 overseas factories, many of which are ISO certified. Every 2 months, one or more shipping containers is sent to us at our distribution warehouse located in Minneapolis, MN, USA. As we continually have products being manufactured for us, the lead time to accommodate extra-large orders can vary from 45 to 90 days depending on the cycle of our current manufacturing order and scheduled container departure date. Many times our existing stock order can be appended to accommodate a larger order, and

then included in our next scheduled container.

Expedited Manufacturing Process and Lead Times
Frequently, we get requests from customers that require expedited manufacturing. In fact, in a given month, we work with 3 to 4 such requests. Expedited manufacturing means that we can move your project to the top of the manufacturing queue (when possible), and upon completion, have this shipment sent to our distribution warehouse in Minneapolis, MN, USA by economy air. If you have received a quotation from us, we may include a line item labeled SHIP-OCEAN-AIR.

Our economy air partner is typically DHL or FEDEX. Economy air can add anywhere from 10 to 25% additional costs to the net invoice and is based on the weight of the total shipment. Transit times from the date of receipt of an approved customer purchase order to available shipping from our distribution warehouse can vary, but typically are 10 to 15 days. This is a significant time reduction compare to "Standard Manufacturing".

As we are the OEM manufacturer and importer of record responsible for shipping costs, duties and tariffs, we CANNOT direct-ship to your end location from manufacturing. Many products - such as Apple(TM) cables - are made under license and as part of such license, we are required to have the product shipped directly to our distribution warehouse. We also cannot use your shipping account for such transportation costs, as My Cable Mart is registered with USA customs and has provided security bonds to expedite the import process.

To start the process, send an email detailing your needs to **quotes@MyCableMart.com**

Video Cables - VGA

Our SVGA cables are TRIPLE shielded and available in lengths from 3ft to 200ft - in standard or Ultra-Thin configurations. Also available: VGA/Audio Combination Cables, VGA Extension Cables, Switches, Amplifiers, and Video Distribution Units. VGA cables are considered legacy-type cables used to connector older computers to VGA type monitors. Many newer monitors while supporting newer technologies such as HDMI, DVI, USB Type-C, many still support the analog 15-pin trapezoid shaped VGA connector. Most devices have a FEMALE port, while VGA cables have MALE connector pins.

Computer Cables - Firewire / 1394

Firewire / 1394 / iLink

Firewire cables (also known as iLink and IEEE cables) are primarily used in the marketplace to connect Digital Video Cameras and Hard Drives to PC's. A typical Firewire port found on a Digital Video Camera is a "4 pin" variety. My Cable Mart carries many lengths and adapters to go from 6 pin to 4 pin, 6 pin to 9 pin, and 9 pin to 4 pin. We will CONTINUE to carry this legacy cable for as long as available from our distributors. However, many lengths and types are now discontinued and no longer available.

Computer Cables - SAS & Mini SAS Cables

Serial-attached SCSI (SAS) cables provide serial communication for the transfer of data for directly attached devices, such as hard disk drives, solid-state drives, and CD-ROM drives. In computing, Serial Attached SCSI (SAS) is a point-to-point serial protocol that moves data to and from computer storage devices such as hard disk drives and tape drives.

SAS technology has created a variety of different connectors, such as SFF-8086, SFF-8087, SFF-8088, SFF-8470, and SFF-8484 to name a few of the 17 different types now supported.

TV Antennas
Antennas for HDTV and Radio

Get up to 30 digital, crystal-clear, UNCOMPRESSED 1080P channels right over the air for FREE using an off-air TV antenna. Many cable and satellite providers have an F-Coax input connection on their receivers, allowing you to map channels to their local feeds/guides. Check your local ABC, NBC, CBS, FOX (and other) providers to find out if they are broadcasting their channels in UHF (new standard) or VHF (old standard - but still used in some markets) to determine if you need a UHF ONLY or UHF/VHF supporting antenna.
